

Tournament Opening Ranges: Depth & ICM

Every position, solved. From the early levels to the money bubble.

Opening ranges at 40bb and 20bb, final-table ICM side by side against chip EV, and a realistic near-bubble table, all as full 169-hand charts pulled straight from GTO Ranges+.

Tournament ranges are never fixed. Two forces move the line between a raise and a fold on every hand: how deep you are, and whether ICM is in play. Most players learn one chip-EV chart and stop there, then bleed equity the moment the stacks get short or the money gets close.

This pack shows both forces at work, position by position, as side-by-side charts. Learn where the borders move and you have a preflop game that holds up from level one to the final table.

What's inside

Part 1 Depth: 40bb vs 20bb

Part 2 Final-table ICM vs chip EV

Part 3 The near-bubble table

Two forces move every tournament range

At tournament depths, opening is a raise-or-fold decision. Where the line between raise and fold sits comes down to stack depth and ICM. This pack shows both, position by position, as side-by-side 169-hand charts so you can see exactly which hands move.

Depth. Shorter stacks favor raw card strength over playability. As you drop from 40bb to 20bb the premiums are unchanged, but the widest, most speculative steals trim off the bottom because there is less postflop room to realise their equity.

ICM. At a final table or on the bubble, the chips you can lose are worth more than the chips you can win, because busting pays less than laddering. That taxes every thin open. The same range that is correct for chips tightens noticeably once pay jumps are on the line, and short stacks start open-jamming.

In every chart, orange cells open, grey cells fold, and deeper orange means the hand raises more often. Suited hands sit above the diagonal, offsuit below, pairs run down it. The summary table near the back compares every seat, depth, and ICM at a glance.

All ranges: GTO Ranges+ solved spots, 8-handed MTT.

40bb vs 20bb opening ranges

Same seat, two depths. Watch the bottom-left of each chart trim as the stack shortens.

UTG: 40bb vs 20bb

Opens **17.3%** at 40bb, **17.4%** at 20bb.

Open Fold

Under the gun the range barely moves between 40bb and 20bb. The opening hands are value-dense to begin with, and value holds its worth at any depth. What changes is what happens after the raise: shorter, the stack-to-pot ratio is lower and you are more often committed, so the discipline is in not adding speculative hands here, not in cutting them.

Lojack: 40bb vs 20bb

Opens **23.6%** at 40bb, **22.4%** at 20bb.

Open Fold

The lojack tightens a touch as you get shorter. A few of the weakest suited and offsuit hands that open at 40bb quietly drop at 20bb, because with less room to maneuver postflop the thin steals realise less equity. The core, pairs and suited broadways, is identical.

Hijack: 40bb vs 20bb

Opens **28.5%** at 40bb, **26%** at 20bb.

The hijack sheds a handful of the loosest opens moving from 40bb to 20bb. Shorter stacks mean more all-in-preflop and less postflop play, which rewards raw card strength over playability. The suited connectors near the bottom of the range are the first to go.

Cutoff: 40bb vs 20bb

Opens **36.9%** at 40bb, **31.9%** at 20bb.

Open Fold

The button feels depth the most, dropping from opening over half the deck at 40bb to around 42% at 20bb. With a shorter stack the widest steals lose their postflop leverage and take on more risk relative to reward, so the loosest offsuit and weak-suited hands fold. The steal habit stays, the very bottom of it does not.

Chip EV vs final-table ICM (20bb)

Same seat, same 20bb stack. The right chart is what changes once you are playing for pay jumps, not just chips.

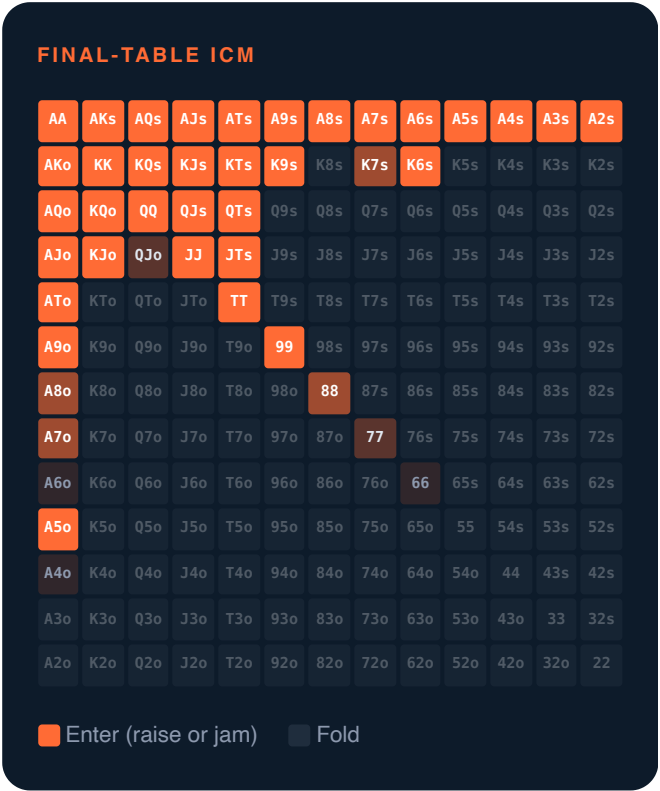

UTG: chip EV vs ICM

Opens **17.4%** for chips, tightening to **15.2%** under final-table ICM. That is **2.2 points** of hands to fold once pay jumps matter.

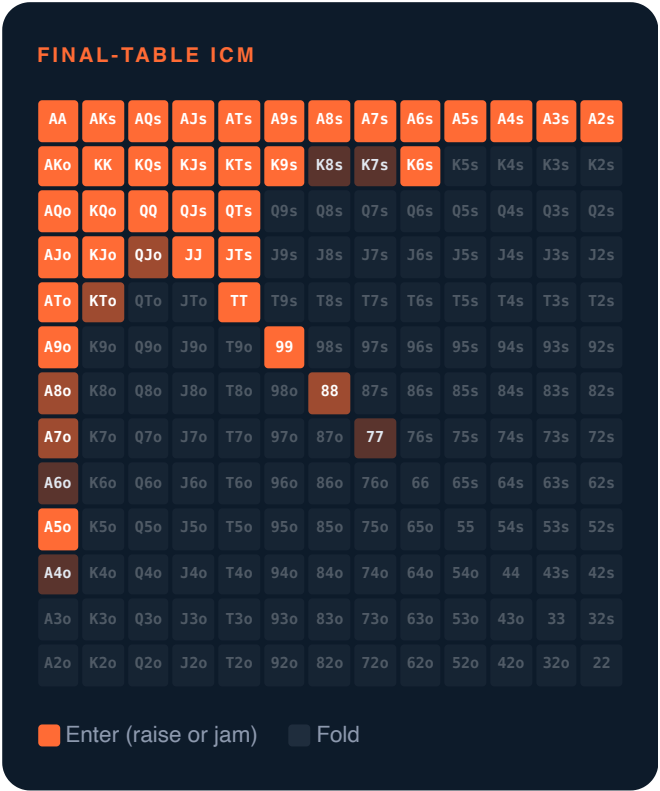

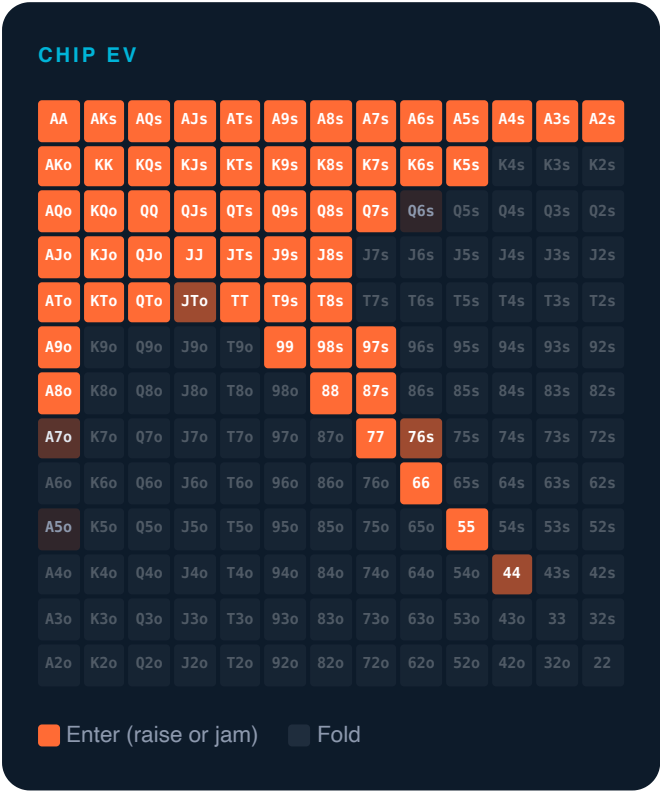

Lojack: chip EV vs ICM

Opens **22.4%** for chips, tightening to **17.7%** under final-table ICM. That is **4.7 points** of hands to fold once pay jumps matter.

Hijack: chip EV vs ICM

Opens **26%** for chips, tightening to **19.3%** under final-table ICM. That is **6.7 points** of hands to fold once pay jumps matter.

Cutoff: chip EV vs ICM

Opens **31.9%** for chips, tightening to **23.7%** under final-table ICM. That is **8.2 points** of hands to fold once pay jumps matter. Under ICM the solver also mixes in an open-shove with 2.6% of the range, taking fold equity now rather than raising into a re-jam it cannot call.

Button: chip EV vs ICM

Opens **41.6%** for chips, tightening to **35.6%** under final-table ICM. That is **6 points** of hands to fold once pay jumps matter. Under ICM the solver also mixes in an open-shove with 8.9% of the range, taking fold equity now rather than raising into a re-jam it cannot call.

Near-bubble ICM: a real bubble table

One realistic bubble table, stacks from 7bb to 50bb. Survival trumps chips, so short stacks stop raising and start jamming.

UTG · 17BB · NEAR-BUBBLE

UTG at 17bb: on the bubble

Enters **12.4%** of hands (12.4% raise, 0% jam).

Enter (raise or jam) Fold

At 7bb on the bubble this seat is essentially jam-or-fold. 17.4% of hands open-shove and only 2.5% open-raise: a min-raise commits too much of the stack, so jamming takes the fold equity cleanly and avoids raise-folding your tournament life away.

HIJACK · 11BB · NEAR-BUBBLE

Hijack at 11bb: on the bubble

Enters **18.7%** of hands (6.5% raise, 12.2% jam).

Enter (raise or jam) Fold

At 15bb this seat still opens for a raise (13.1%), with 10.8% of the range shoving outright. Deeper than the truly short stacks, it keeps a raising range but leans on hands with real showdown value because the covering stacks behind can call lightly.

Opening frequency at a glance

SCENARIO	UTG	LOJACK	HIJACK	CUTOFF	BUTTON
40bb chip EV	17.3%	23.6%	28.5%	36.9%	52%
20bb chip EV	17.4%	22.4%	26%	31.9%	41.6%
20bb final-table ICM	15.2%	17.7%	19.3%	23.7%	35.6%

Read down a column and you see two independent forces on the same seat: shortening from 40bb to 20bb trims the loosest opens, and layering final-table ICM on top trims them again, harder, especially in the steal seats. Neither force touches the premiums. Both punish thin, speculative opens, which is exactly where chip-EV instincts cost the most equity in real tournaments.

Next step. This pack is opening ranges across depth and ICM. Full tournament play also needs 3-bet ranges, defense ranges, and the PKO and 50%-left ICM trees. GTO Ranges+ has all of them, solved, for every position and stack, with a trainer that drills the borders until they are automatic.

PUT IT INTO PRACTICE

Drill every one of these, solved.

GTO Ranges+ has every opening, 3-bet, and ICM range for cash, MTT, PKO, and Spins, with a trainer, streaks, and mistake-breakdown reports. All offline, in your pocket.
